

Get started with GITHUB account and repository

To get a "GITHUB" account, follow the below steps :-

1. Go to the GitHub link and make your account.
 1. Email id : same as of your office email ID : Example : saurav.raai@fermionic.design
 2. User name : <Name-surname-fermionic> : Example : saurav-rai-fermionic
 3. Password : Type any password you want : Example : Any@Password123
 4. Now in the pop up, you will see an option to download its desktop version with the name : "GitHub Desktop" as shown below :-

2. Now ask for the permission to the repository from the ADMIN "ask your colleagues who is the admin".
3. Once you get the permission, now you need to see data in the GitHub Desktop app. For that you need to "clone". Cloning a GitHub repository refers to the process of creating a local copy of a remote repository hosted on GitHub
4. You can give any name to the directory for cloning.
5. Below is the "GitHub Desktop app"; in this click on the 1st option "View the files of your repository in Explorer".

6. Then upload your python codes in the repository as mentioned by your Lead.
